

EPAM announces global Center of Excellence for Mobile, reinforcing its ongoing commitment to customer demands

September 20, 2011 4:32 PM ET

Newtown, PA — September 20, 2011 — EPAM Systems, Inc., a leading [software engineering and IT Outsourcing \(ITO\) provider](#) with development centers across Central and Eastern Europe (CEE), has announced the opening of the EPAM Mobile Competency Center (EMCC) offering comprehensive services in every aspect of application development for the mobile community. Backed by broad experience, a strong track record of delivering mobile projects for the customers worldwide, and deep expertise in mobile development and consulting, the EMCC offers a comprehensive portfolio of professional mobile services including application development and enhancements both for ISVs and corporations, IA and UI design, testing and certification, maintenance and support as well as "mobilization" of existing business applications and content.

EPAM's first mobile project (the development of a complex mobile framework for a leading enterprise solutions vendor) dates back to 2005. Since that time EPAM has successfully delivered a significant number of mobile platforms and business applications for a range of industries – from [ISVs and Technology](#), [Finance and Banking](#), [Business Information and Media to Travel](#) and [Retail and CPG](#) companies. In 2011 EPAM launched the EMCC to serve as a coordination point for the mobile expertise already residing across domains within EPAM, combining knowledge of specific hardware devices with development and deployment of applications on the full range of mobile platforms – iPhone/iPad, Windows Phone 7, Android, Blackberry, and Symbian. By working in a distributed framework, EPAM is better able to integrate the mobile-specific competencies and best practices with a host of business and technical solutions that leverage them – mobile platforms and frameworks, industry vertical business applications, data driven backend integrations, news and content delivery, social applications, games, and mCommerce applications.

"As a complement to our existing [Competency Centers](#) across key verticals and technical domains, our Mobile Competency Center is an important addition to the full range of engineering services and expertise we can provide to our clients," said Arkadiy Dobkin, EPAM CEO and President. "It will allow us to better leverage our existing knowledge and experience in mobile, while fostering the business-focused innovation needed to be a leader in this fast-developing domain."

About EPAM Systems

Established in 1993, EPAM Systems, Inc. is a leading global software engineering and IT consulting provider with delivery centers throughout Central and Eastern Europe. Headquartered in the United States, EPAM employs over 6,500 professionals and provides services to clients worldwide using a global delivery model through its client facing and delivery operations in North America, UK, Germany, Switzerland, Sweden, Russia, Belarus, Hungary, Ukraine, Poland, and Kazakhstan.

EPAM's core competencies include complex software product engineering for leading global software and technology vendors as well as development, testing, maintenance, and support of mission critical business applications and vertically oriented IT consulting services for global Fortune 2000 corporations.
