

EPAM Ranks in the Leadership Zone Across All Service Lines in Zinnov Zones for Digital Ratings

April 18, 2016 1:01 PM EDT

NEWTOWN, Pa., April 18, 2016 (GLOBE NEWSWIRE) -- EPAM Systems, Inc. (NYSE:EPAM), a leading global provider of product development and software engineering solutions, today announced that it was ranked in the Leadership Zone in Zinnov Zones for Digital Services Ratings. EPAM was one of only five service providers, out of the 16 assessed, to be ranked in the Leadership Zone and was also ranked in the Leadership Zone in all five assessment categories: Digital Consulting Services, Design and Experience Services, Digital Application Engineering Services, Digital Platform Integration Services and Data Management and Analytics Services.

"As we continue to see strong demand from our clients for digital capabilities, we are focused on enabling them to unleash the power of digital technologies to create new sources of value," said Kevin Labick, VP Digital Strategy and Experience Design, EPAM. "We are pleased to be recognized in the Leadership Zone across all five service lines assessed by Zinnov for digital services. This recognition confirms EPAM as a market leader, demonstrating our strong capabilities of delivering end-to-end services and our focus on innovative and scalable software solutions across most verticals."

EPAM also scored high across the five assessment categories on 'scalability', which includes product engineering services (PES) experience. The report states that "existing capabilities of Product Engineering Service Providers provide them a head start in digital services market" and that PES vendors employ a large proportion of new technologies and research-focused talent, which is not the case for traditional IT services firms. The report also states that PES vendors were early movers in Agile, Scrum, DevOps and Design thinking.

This annual list supports business decision-makers who lead global digital partner selection. Recognition in the Leadership Zone indicates excellent performance across service lines, digital prowess and scalability. Digital prowess includes analysis of services spread, ecosystem leverage, digital workforce, digital assets and engagement models. Scalability includes scale of digital business, digital clientele and product engineering experience.

Zinnov ranked 16 service providers based on digital prowess and scalability by evaluating digital clientele, scale of digital business, product engineering experience, spread of services, digital workforce and assets, engagement models and ecosystem leverage. Service providers were then rated across five service lines including digital consulting and transformation, design and experience, digital application engineering, digital platform integration and data management and analytics.

Zinnov Zones for digital is an extensive, annual study of the capabilities of Digital Service providers, and is designed to assist enterprises in making the right decisions in their selection of outsourcing partners from across the world.
