

EPAM Named a Strong Performer Among Mobile Enterprise Application Services Providers by Independent Research Firm

March 27, 2017 5:00 PM EDT

NEWTOWN, Pa., March 27, 2017 (GLOBE NEWSWIRE) -- EPAM Systems, Inc. (NYSE:EPAM), a leading global provider of product development and software engineering solutions, today announced it has been named a Strong Performer in the report "The Forrester Wave™: Mobile Enterprise Application Services Providers, Q1 2017." EPAM was cited previously in "The Forrester Wave™: Mobile Enterprise App Services Providers – Midsize Providers, Q1 2015" report and is the only vendor from that research to be included in the new report that evaluates the top nine vendors. According to the Q1 2017 report, "EPAM combines its product engineering roots with a focus on creative and digital... positioning it well for companies seeking a product-based approach to mobile enterprise app development."

"We believe EPAM's inclusion in this report, along with exceptional companies such as IBM, Accenture and Deloitte, demonstrates our ability to successfully combine our design, engineering, and business capabilities to deliver transformational mobile enterprise solutions," said Yev Galper, Director, Technology Solutions, EPAM. "As more businesses treat service providers as their strategic partners, as well as technical partners, the market for delivering transformational mobile enterprise apps will only continue to grow. EPAM's deep software product engineering expertise makes us a strong choice for companies seeking a product-based approach to mobile enterprise app development."

EPAM's ability to blend the offerings of B2B and B2C applications allows the company to deliver an integrated digital experience that not only provides an engaging customer interface, but also streamlines and optimizes internal business processes. With over 24 years of experience working with independent software vendors, such as SAP and Oracle, EPAM has expertise in application integration and functionality. Clients with a vision who are unsure how to execute may also find value in EPAM's "innovation as a service" offering, which helps enterprises prototype new ideas, leverage new technologies, organize hackathons, and succeed in other innovation-oriented activities with the guidance of EPAM's business consultants, service design experts, and software developers.

To assess the state of the enterprise mobile applications market, Forrester evaluated the strengths and weaknesses of service providers and examined past research, user needs assessments, and vendor and expert interviews. Forrester then evaluated suppliers across 20 criteria in three categories: current offering, strategy, and market presence.
