

PerkinElmer Introduces New LED Fiber Optic Illuminator at Lightfair 2009

NEW YORK, May 04, 2009 (BUSINESS WIRE) --Today at Lightfair International 2009 PerkinElmer, Inc., a global leader focused on improving the health and safety of people and the environment, announced the introduction of its new LED fiber optic illuminator that exceeds the brightness levels of 150-watt halogen technology while using fifty percent less power.

PerkinElmer's new LED fiber optic illuminator offers an energy efficient, maintenance-free alternative to halogen-based and metal-halide fiber optic illuminators and is the latest addition to the Company's range of capabilities for medical and industrial lighting. The LED illuminator uses a proprietary optical light engine designed to couple high intensity white light into 3-10 mm fiber optic bundles for applications including endoscopy, microscopy, and machine vision. Additionally, in contrast to other light sources, the color temperature of the LED light does not change when the light is dimmed or increased.

"PerkinElmer is pleased to introduce its new energy efficient LED fiber optic illuminator for medical and industrial markets at Lightfair International 2009, reflecting our commitment to providing a robust pipeline of custom and standard LED solutions," said Joel Falcone, vice president and general manager, PerkinElmer's global Illumination business. "We are focused on new solutions not only for medical lighting, but a range of other demanding specialty markets including safety and security."

PerkinElmer will exhibit our new LED fiber optic illuminator at booth #3009 at the 20th Annual Lightfair International conference. Lightfair International will take place May 5 -7, 2009, at the Jacob K. Javits Convention Center in New York.

PerkinElmer provides custom and standard LED illumination solutions to a host of specialty markets including safety and security, medical, dental, industrial, and analytical markets.
