Sustainable Procurement Policy

Revvity recognizes the important role our end-to-end supply chain plays in reducing our overall environmental impact. We are diligent in our commitment to establish and maintain a sourcing system that is sustainably focused, high quality, and provides a competitive advantage for the company. We are committed to ensure Revvity continues a sourcing focus which encompasses its impact on the environment, our stakeholders, and the communities where we live and work by focusing on Scope 3 Green House Gas (GHG) emissions within the procurement process. By understanding our entire GHG emission profile through sourcing data, we can continue to work toward delivering a holistic approach to reducing our overall GHG emissions.

Revvity is working to further our commitment to a sustainable sourcing process and is beginning to focus on our suppliers Scope 3 emissions.

We are committed to:

- Assessing our spend and identify top suppliers. Focusing on our top suppliers will allow Revvity to dictate direction and materiality for future processes and support in creating our research standards to understand environmental impact within sourcing and procurement.
- Analyze and further enhance our supplier code of conduct to be inclusive of sustainable sourcing practices.
- Create staff training for sourcing teams aligned with the Sustainability Procurement Policy, our updated Supplier Code of Conduct, and sustainable procurement processes.

By working to advance our commitment to include Scope 3 as part of our holistic sustainability policy, we are leveraging our sourcing processes and end-to-end supply chain to positively manage emission-related outputs. At Revvity, we believe in infusing sustainability into all aspects of our business.

This Sustainable Procurement policy is updated as of May 23, 2023
