ARCUS BIOSCIENCES

Forward-Looking Statements/Safe Harbor

Forward Looking Statements Safe Harbor: This presentation contains forward-looking statements about Arcus Biosciences, Inc. ("we," "Arcus" or the "Company") made pursuant to the safe harbor provisions of the Private Securities Litigation Reform Act of 1995. All statements regarding events or results to occur in the future contained in this presentation are forward-looking statements, including statements about: our strategy, advantages, and expectations, including regarding our productivity and competitiveness; expectation that our cash, investments and facilities are sufficient to fund operations through our initial pivotal read-outs for domvanalimab, quemliclustat and casdatifan, which includes PEAK-1; potential of our investigational products and portfolio, including our investigational products potential to be best or first in class; anticipated benefits of our collaborations with Gilead, Taiho and AstraZeneca; achievement and expected timing of clinical and developmental milestones, including the initiation of clinical trials and the timing of data readouts; excepted timing for clinical data to be available or presented and the scope of such data; launch of our investigational products and such products becoming an available treatment; formulation of our investigational products and the benefits of such formulation; market potential or patient population for any of our investigational products; and possible first to market advantage for any of our investigational products.

These forward-looking statements are subject to a number of risks, uncertainties and assumptions that may cause actual results to differ materially from those contained in any forward-looking statements we may make, including, but not limited to: risks associated with preliminary or interim clinical data or preclinical data not being guarantees that future data will be similar; the unexpected emergence of adverse events or other undesirable side effects; difficulties or delays in initiating, conducting or completing our clinical trials due to difficulties or delays in the regulatory process, enrolling subjects or manufacturing or supplying product for such clinical trials, all of which may be exacerbated by unfavorable global economic, political and trade conditions; risks associated with our collaboration arrangement with Gilead including our dependence on Gilead for the successful development and commercialization of our investigational products; changes in the competitive landscape; our limited operating history and our ability to manage our growth; our ability to obtain and maintain intellectual property protection for our product candidates; and the inherent uncertainty associated with pharmaceutical product development and clinical trials. It is not possible for our management to predict all risks, nor can we assess the impact of all factors on our business or the extent to which any factor, or combination of factors, may cause actual results to differ materially and adversely from those anticipated or implied in the forward-looking statements. Further information on these and other factors that could affect the forward-looking statements made herein are described in our most recent periodic reports filed with the U.S. Securities and Exchange Commission. You should not rely upon forward-looking statements as predictions of future events. Except as required by law, neither we nor any other person assumes responsibility for the accuracy and completeness of the forward-looking statements. We undertake no obligation to update publicly any forward-looking statements for any reason after the date of this presentation to conform these statements to actual results or to changes in our expectations.

Third-Party Sources: This presentation contains certain information related to or based on studies, publications, surveys and other data obtained from third-party sources, and our own internal estimates and research, including without limitation relating to market size and potential. This information is based on a number of assumptions, projections and estimates, including with respect to our future performance and the future performance of markets in which we operate, and are necessarily subject to a high degree of uncertainty and risk and you are cautioned not to give undue weight to such estimates.

No Regulatory Approval: All of Arcus's molecules are investigational and Arcus (and Gilead for all of the molecules in each optioned program) has not received approval from any regulatory authority for any use globally, nor established the safety and efficacy of these investigational molecules.

Notice of Trademark: The Arcus name and logo are the property of Arcus. All other trademarks used herein are the property of their respective owners and are used for reference purposes only. Such use should not be construed as an endorsement of Arcus.

Casdatifan (HIF-2α) in ccRCC

© Arcus Biosciences 2025

ARC-20 Results Presented at ASCO GU Support Casdatifan Having a Potential Best-in-Class Profile for ccRCC

Across all three expansion cohorts
(approximately 90 patients)

- ✓ **Lower primary progressive disease (PD) rate** – approximately half the rate observed for belzutifan in LITESPARK-005
- ✓ **Higher ORR*, despite less maturity** – mid-20s to low-30s vs. high teens to low-20s for belzutifan
- ✓ **High DCR** – 80%+ of patients experience some clinical benefit
- ✓ **Highly durable responses** – only 2 (of 26) responders have progressed across all 3 cohorts
- ✓ **Longer mPFS** -- 9.7 mos for 50mg BID / not reached (NR) for other cohorts
- ✓ Comparable rates of on-target and SAEs

100mg QD tablet[1]
(Selected Phase 3 dose and formulation)

15%	Primary PD rate
33%	ORR** (with short follow-up)
85%	DCR
1.6 months	Time to Response
NR	mPFS not reached

**ORR throughout this presentation refers to confirmed ORR unless otherwise noted
*based on casdatifan in ARC-20, a Phase 1 study, and belzutifan in LITESPARK-005, a Phase 3 study
1. DCO date of January 3, 2025; median (range) follow-up for the 100mg QD cohort was 5 (2–6+) months (ongoing)
Source for LITESPARK-005: Albiges L. et al. Abstract LBA88, ESMO 2023
BID: twice daily; DCO: data cut-off; DCR: disease control rate; mos: months; mPFS: median profression-free survival; ORR: overall response rate; QD: once daily; SAE: serious adverse event

Key Efficacy Measures All Compare Very Favorably to Contemporary Benchmark Studies Despite Shorter Follow-up

Efficacy-Evaluable Population[1,2]	Casdatifan 50mg BID (n = 32)	Casdatifan 50mg QD (n = 28)	Casdatifan 100mg QD (n = 27)
Confirmed ORR (n) [95% CI]	**25% (8)** [11.5, 43.4]	**32% (9)**** [15.9, 52.4]**	**33% (9)** [16.5, 54.0]
Med time to response, mos.	**2.8**	**4.1**	**1.6**
Best Overall Response (n)			
CR	0% (0)	4% (1)	0% (0)
PR	31% (10)*	29%(8)	33% (9)
SD	50% (16)	54% (15)	52% (14)
PD	**19% (6)**	**14% (4)**	**15% (4)[3]**
Disease control rate [95% CI]	**81%** [63.6, 92.8]	**86%** [67.3, 96.0]	**85%** [66.3, 95.8]
Median follow-up, months (range)	15 (7–19+)	12 (9–14+)	5 (2-6+)
Median progression free survival	**9.7 months**	**Not reached**	**Not reached**

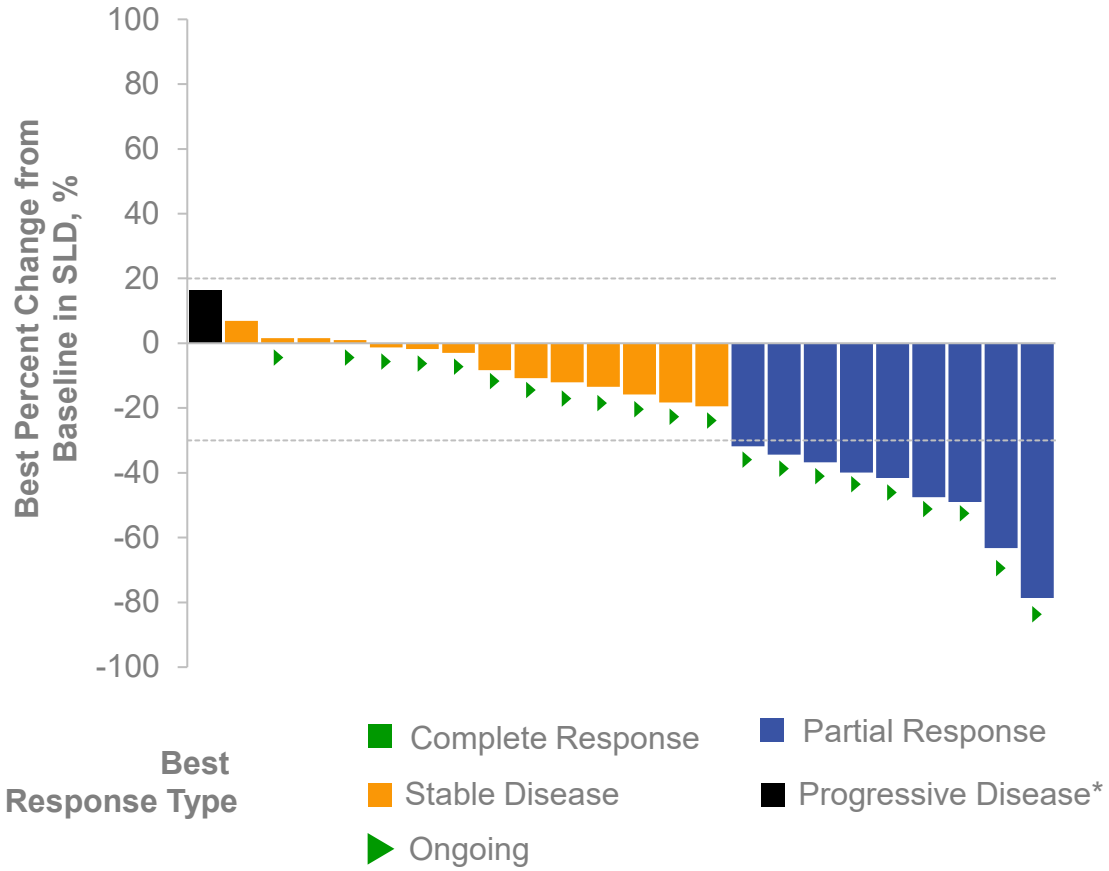

*** In the 50mg BID cohort, one unconfirmed responder remains on treatment.**
****In the 50mg QD cohort, ORR includes one unconfirmed responder who became a confirmed responder after the DCO.**

Unless otherwise noted, as of DCO date January 3, 2025
1. For the 50mg BID and 50mg QD cohorts, there were a total of four patients excluded from the efficacy evaluable population. 3 patients deemed ineligible shortly after enrollment (2 patients due to kidney function, 1 patient due to hemoglobin levels). One patient discontinued treatment before the first scan due to an unrelated AE.
2. In the 100mg QD cohort, 2 of 29 patients in the safety population were excluded from the efficacy evaluable population; 1 is ongoing treatment and has not yet received a first scan; the other discontinued prior to the first scan due to an unrelated adverse event.
3. Includes two patients with radiological progressive disease and 2 patients who had clinical progression before the first scan.
BID: twice daily; CI: confidence intervals; CR: complete response; DCO: data cut-off; n: number; ORR: overall response rate; PD: progressive disease; PR: partial response; QD: once daily

ARCUS BIOSCIENCES

Domvanalimab in Upper GI Cancers and Non-Small Cell Lung Cancer

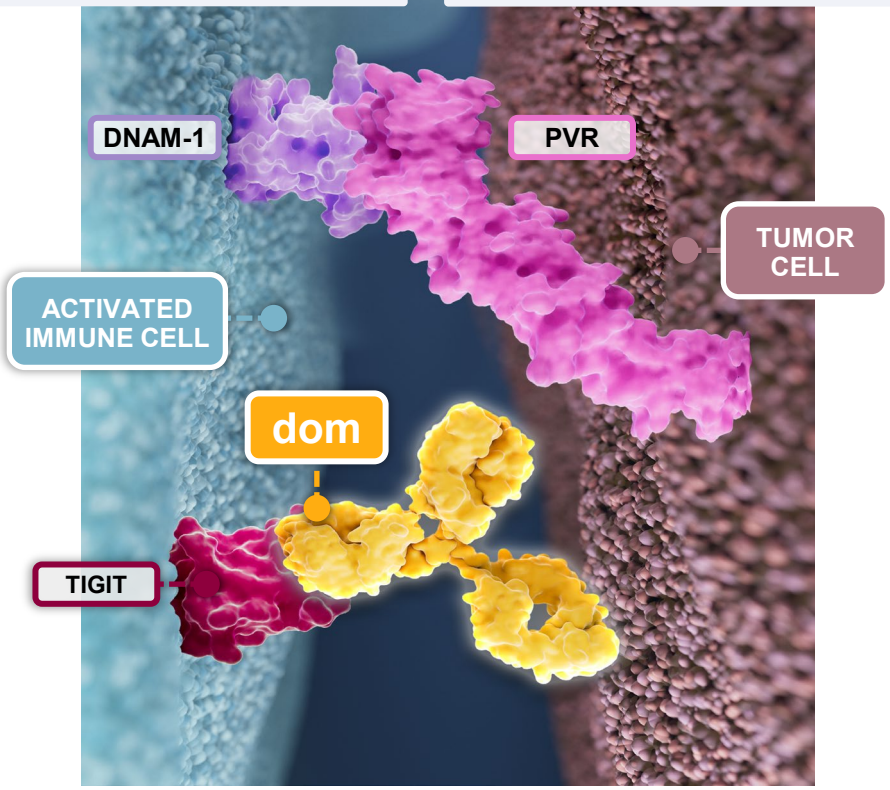

© Arcus Biosciences 2025

Dom is the Most Clinically Advanced Fc-Silent Anti-TIGIT Antibody in Development

TIGIT inhibition turns an immuno-suppressive "brake" into an accelerator of adaptive immunity

1 **Dom blocks TIGIT, an inhibitory "brake" on immune cells,** from binding to CD155 (PVR) on tumor cells

2 TIGIT blockade **enables PVR to bind CD226 (DNAM-1), an "accelerator" on immune cells,** driving tumor cell kill

First-to-Market potential in Upper GI & the only Fc-silent anti-TIGIT in Ph3 NSCLC

Fc-silent

Avoids depletion of TIGIT-bearing cells:

- Minimizes treatment interruptions by avoiding Treg depletion-related immune AEs
- Maximizes efficacy by avoiding potential depletion of cancer-fighting Teff cells

Individual Agents

Administered as individual agents (vs. co-form)

- Pursuing 30-minute co-administration infusion time for dom and zim

Optimized Development Strategy

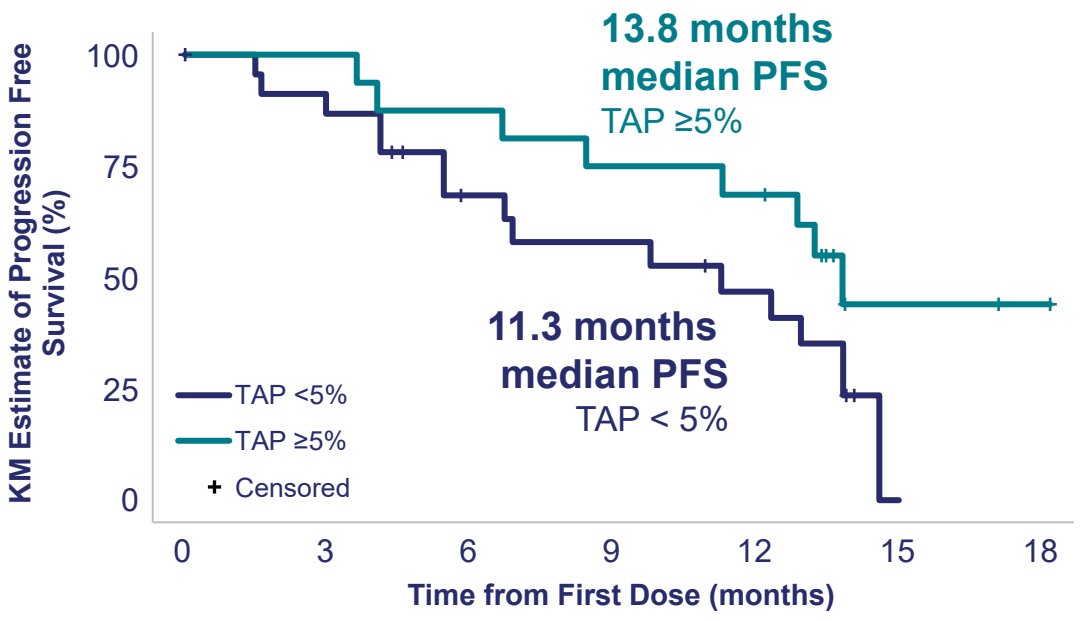

Positioned to be first to market in 1L gastric, 1L NSCLC (all-comers) and Stage 3 NSCLC

Note: co-administration of dom + zim was not part of STAR-121 Phase 3 study in 1L NSCLC
DNAM-1: DNAX accessory molecule; dom: domvanalimab; GI: gastrointestinal; NSCLC: non-small cell lung cancer; Ph: phase; PVR: poliovirus receptor; TIGIT, T cell immunoreceptor with immunoglobulin and ITIM domain; Treg: regulatory T-cells; zim: zimberelimab

Phase 3 Evaluating Dom + Zim + Chemo vs. Pembro + Chemo in 1L NSCLC (All PD-L1 Subgroups)

- Uses standard of care, pembrolizumab, in the comparator arm

Gilead Sciences is operationalizing STAR-121.

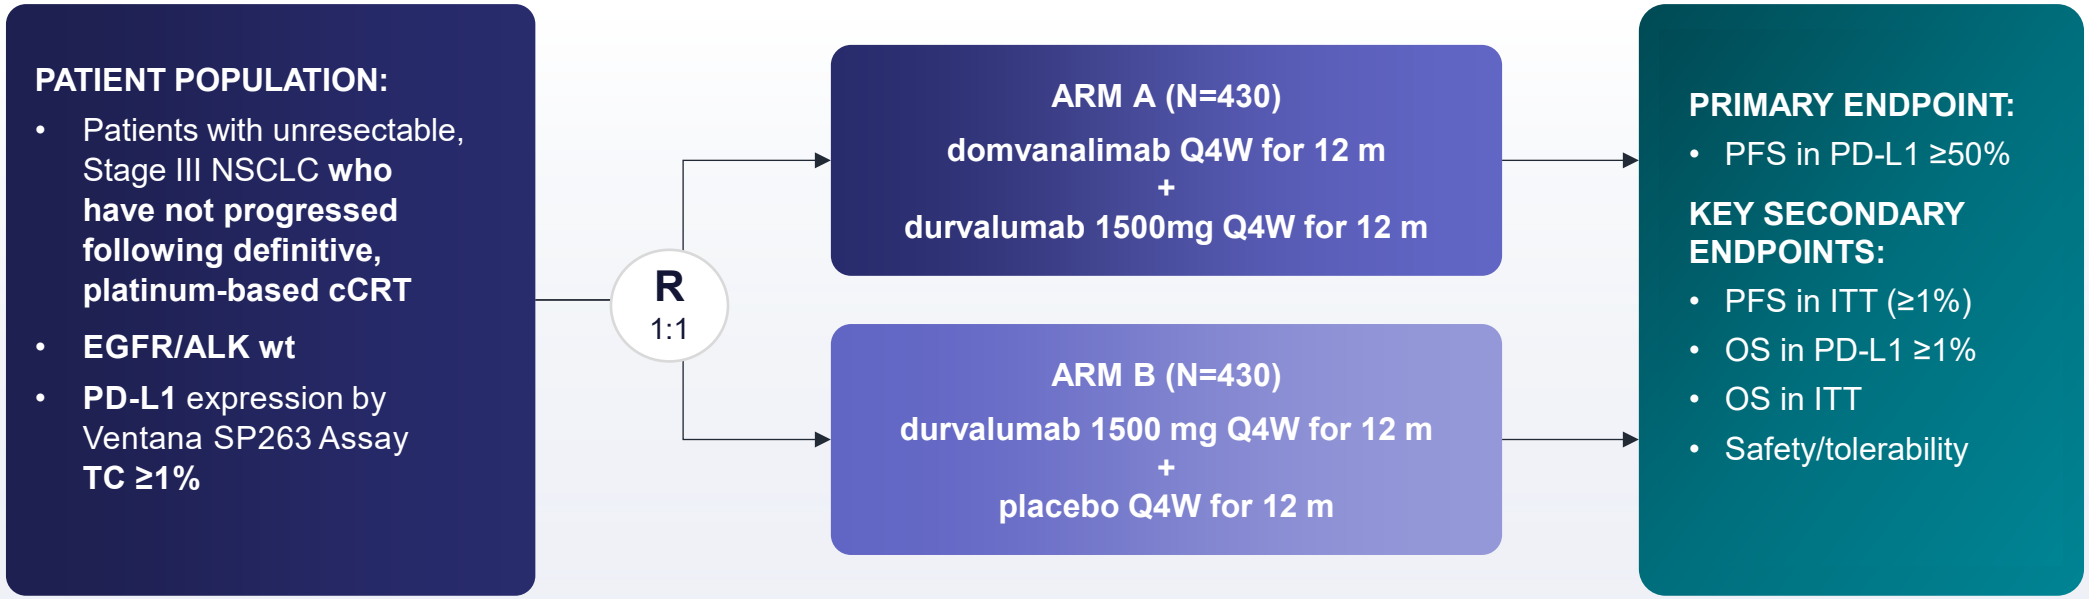

NCT #: NCT05502237

1L: first-line; BICR: blinded independent central review; dom: domvanalimab; DOR: duration of response; ECOG: Eastern Clinical Oncology Group; NSCLC: non-small cell lung cancer; ORR: objective response rate; OS: overall survival; pembro: pembrolizumab; PFS: progression-free survival; QoL: quality of life; R: randomized; sq: squamous; zim: zimberelimab

Phase 3 Evaluating Dom + Durva vs Placebo + Durva in Unresectable, Stage III NSCLC

- Combines domvanalimab with durvalumab standard-of-care in Stage III NSCLC
- Potential to be first anti-TIGIT combination in this curative intent setting

Strat Factors:

- Disease stage prior to cCRT (IIIA vs. IIIB/IIIC)
- PD-L1 status (TC ≥ 50% vs. TC 1-49%), as assessed by a central reference laboratory using the VENTANA PD-L1 (SP263) IHC assay
- Histology (Sq vs Non-sq)

NCT #: NCT05211895

cCRT: concurrent chemoradiotherapy; dom: domvanalimab; durva: durvalumab; IHC: immunohistochemistry; ITT: intent to treat; m: months; NSCLC: non-small cell lung cancer; OS: overall survival; PFS: progression free survival; Q4W: every 4 weeks; R: randomized; TC: tumor count

Quemliclustat in Pancreatic Cancer

© Arcus Biosciences 2025

Quemliclustat: A Small Molecule CD73 Inhibitor with Several Key Attributes

QUEMLICLUSTAT

- Highly potent small molecule
- Target coverage achieved at doses as low as 25mg Q2W
- Extremely long (4+ days) half-life, enabling Q2W dosing by IV infusion

Biological rationale for CD73 inhibition in pancreatic cancer

- Pancreatic cancer exhibits very high expression of CD73, the main source of intra-tumor adenosine
- Immunogenic chemotherapy (e.g., gemcitabine/nab-paclitaxel) releases ATP and contributes to adenosine production
- Tumors such as pancreatic cancer become sensitive to immune attack if adenosine production (i.e., CD73 activity) is blocked by quemli while administering SOC chemotherapy

Potential advantages over CD73 antibodies[1]

- ✓ Highly potent and selective inhibition of both tumor cell-bound and soluble CD73
- ✓ Greater inhibition of enzymatic production of adenosine
- ✓ Orders of magnitude more potent
- ✓ Greater permeability of tumor tissue

Quemliclustat is an investigational molecule and its safety and efficacy have not been established.

Highlights from the Randomized Phase 1 Study in 1L PDAC

Median overall survival (mOS) was 15.7 months for patients treated with a quemliclustat-based regimen, which exceeds the historical benchmark data for chemotherapy alone (8.5 – 11.7 months)[1,2]

A 37% reduction in risk of death and a 5.9-month improvement in mOS was observed for patients treated with the quemli-based regimen when compared to a synthetic control arm of patients treated with G/nP alone[1]

The quemli-based regimen was well-tolerated, with no new safety signals or significant added toxicity compared to chemotherapy alone[1]

Phase 3 study is ongoing
