Rambus Teams with Google, Interac on Android Pay in Canada

Provider of tokenization software helps secure mobile payments for Interac debit card users

SUNNYVALE, Calif.--(BUSINESS WIRE)-- Today [Rambus Inc.](#) (NASDAQ:RMBS) announced that it is working with Google and Interac Association / Acxsys Corporation, the organizations behind Canada's leading payment brand, to enable *Interac*[®] Debit on Android Pay in Canada. Through the *Interac* Token Service Provider (TSP), which was developed in collaboration with [Rambus](#), *Interac* debit cardholders can make secure mobile debit payments, now using Android Pay, through tokenized transactions.

"We're excited to bring the simplicity and security of mobile payments to *Interac* Debit customers with Android Pay," said Pali Bhat, vice president of Payment Products, Google. "Starting today, people will be able to use their Android device to pay at hundreds of thousands of contactless payment terminals in Canada."

Beyond ease of use, Android Pay is more secure because it doesn't share credit or debit card number with the merchant when consumers pay in stores, but uses a virtual account number to represent the card. Additionally, if the phone is ever lost or stolen, consumers can simply use Google's Find My Device feature to instantly lock the device, secure it with a new password, or wipe it clean of their personal information.

"*Interac* Debit is one of the most popular payment methods in Canada," said Chakib Bouda, CTO of the Rambus Payments Division. "Our collaboration on the TSP will allow millions of consumers to enjoy secure mobile payments using Android Pay in Canada."

"We're excited to bring *Interac* Debit on Android Pay to Canada," said Debbie Gamble, VP, Digital Product and Platforms, Interac Association and Acxsys Corporation. "The launch of Android Pay is another example of how we are working to accelerate the growth of digital payment experiences in Canada through secure, tokenized digital debit transactions. Such accomplishments are the result of innovative technologies and strong partnerships, including our collaboration with Rambus."
