NEWS RELEASE

Revvity Launches “Signals for Startups” to Help Emerging Biotechs Build Scalable Digital Foundations from Day One

2026-07-20

- Enterprise-grade Signals software with guided onboarding positioned specifically for early-stage biotechs
- Science-first setup with ready-to-use Signals environments and modality-specific workflows
- Scalable informatics foundation that supports growth, collaboration and investor readiness

WALTHAM, Mass.—July 20, 2026 -- Revvity, Inc. announced that its Revvity Signals Software business is launching **Signals for Startups**, a new program designed to help emerging biotechnology companies adopt scalable informatics capabilities earlier in their growth journey. Built for early-stage biotechs, the program combines access to enterprise-grade Signals software with guided onboarding and best-practice configurations tailored specifically for smaller biotechs to help accelerate innovation, improve scientific productivity and shorten time-to-value.

Startup biotechs are often under pressure to move quickly with limited IT, informatics and operational resources while managing increasingly complex discovery data. Signals for Startups addresses this challenge with a purpose-built, scalable Signals environment that helps teams focus on science while establishing a strong digital foundation from day one. Out-of-the-box configurations for large and small molecules enable companies to accelerate adoption, standardize data, and enhance collaboration on a proven, scalable informatics infrastructure.

“Signals for Startups addresses a critical need for emerging biotech companies that want to move fast without creating data and workflow challenges that limit their ability to scale,” said Kevin Willoe, president of Revvity Signals Software. “By combining startup-friendly access with guided onboarding and scalable Signals workflows, we are helping early-stage teams build the digital foundation they need to advance discovery, support investor readiness and grow with confidence.”

Signals for Startups offers a structured entry point into the Revvity Signals portfolio with bundled licenses appropriate for startups with a clear path for expansion as companies grow from seed stage through venture investment rounds and beyond. The program is designed to help startups avoid fragmented systems and disconnected data practices that can slow progress, increase rework, and create challenges as research programs mature.

Signals for Startups is expected to be available in the United States and Europe, the Middle East, and Africa in late July 2026.

About Revvity

At Revvity, “impossible” is inspiration, and “can’t be done” is a call to action. Revvity provides health science solutions, technologies, expertise, and services that deliver complete workflows from discovery to development, and diagnosis to cure. Revvity is revolutionizing what’s possible in healthcare, with specialized focus areas in translational multi-omics technologies, biomarker identification, imaging, prediction, screening, detection and diagnosis, informatics and more.

With 2025 revenue of $2.9 billion and approximately 11,000 employees, Revvity serves customers across pharmaceutical and biotech, diagnostic labs, academia, and governments. It is part of the S&P 500 index and has customers in more than 160 countries.
