Trimble Enhances its Field Service Management Portfolio to Offer More Flexibility for Fleets

SUNNYVALE, Calif., April 14, 2015 /PRNewswire/ -- Trimble (NASDAQ: TRMB) announced today the launch of a new fleet management option to extend its comprehensive portfolio of fleet and field service solutions.

Flexible Packaging

Trimble® Fleet Express is the latest addition to Trimble's Field Service Management (FSM) solutions, offering greater flexibility for organizations operating fleets. This new service package combines the ease and simplicity of a self-install, plug-and-play OBDII device with the best features and functionality of Trimble Fleet Management, including vehicle tracking, vehicle maintenance, on-demand reports and scheduling and alert notification. Trimble Fleet Express is one of three fleet management packages available, providing businesses with a choice of solutions to meet their needs.

"Trimble Fleet Express represents an innovative approach to fleet management by bundling a plug-and-play OBDII device with a sophisticated fleet management solution," said John Cameron, general manager of Trimble's Field Service Management Division. "It's an ideal combination to enable an organization to monitor and manage their fleet more efficiently. It is also seamlessly integrated with our Work Management solution which offers optimized scheduling and job dispatch so a business can have complete visibility of their jobs and mobile workers alongside their fleet, all in one package."

Trimble Fleet Express provides real-time location information to companies that manage fleets of all sizes with all types of light-duty vehicles, and provides a more flexible option for those who use leased or employee-owned vehicles where wired-in devices are not an option.

New Mapping Capabilities with ALK Maps

In addition to launching Fleet Express, Trimble has replaced its Bing mapping functionality in its Work Management and Fleet Management solutions with ALK® Maps, a dynamic mapping and route visualization platform from ALK (www.alk.com), a Trimble Company. This new functionality will benefit customers with best-in-class mapping, forward geo-coding, street-level routing and a range of enhanced features.

About Trimble Field Service Management Division

Trimble Field Service Management Division provides visibility into field and fleet operations so businesses can streamline efficiency and increase productivity. The Field Service Management suite includes fleet management, work management and scheduling, worker safety and mobility solutions that transform the effectiveness of work, workers and assets in the field. The cloud-based portfolio allows Trimble to offer customers industry-specific, enterprise-level solutions for exceptional performance and ease of use. For more information about Trimble FSM solutions, visit: www.trimble.com/fsm.

About Trimble

Trimble applies technology to make field and mobile workers in businesses and government significantly more productive. Solutions are focused on applications requiring position or location--including surveying, construction, agriculture, fleet and asset management, public safety and mapping. In addition to utilizing positioning technologies, such as GPS, lasers and optics, Trimble solutions may include software content specific to the needs of the user. Wireless technologies are utilized to deliver the solution to the user and to ensure a tight coupling of the field and the back office. Founded in 1978, Trimble is headquartered in Sunnyvale, Calif.
